

RTU Course "Nonlinear Dynamics. Introduction"

15325 Teorēt.mehānikas un materiālu pretestības katedra

General data

Code	MMP215
Course title	Nonlinear Dynamics. Introduction
Course status in the programme	Courses of Free Choice
Course level	Undergraduate Studies
Course type	Academic
Field of study	Mechanics, Mechanical Engineering, Machine Building
Responsible instructor	Zakrževiskis Mihails
Academic staff	Jevstignejevs Vladislavs Smirnova Raīsa Ščukins Igors Klokovs Aleksejs Šilvāns Eduards
Volume of the course: parts and credits points	1 part, 2.0 Credit Points, 3.0 ECTS credits
Language of instruction	LV, EN, RU
Possibility of distance learning	Not planned
Maximum auditorium capacity	25
Maximum number of students per semester	50
Abstract	Nonlinear dynamics and chaos theory constitute a new multidisciplinary fundamental science for engineers, i.e., it has of a theoretical and practical significance. Nonlinear Dynamics and Chaos ABC: attractors; bifurcations, basins of attraction; solution continuation, chaos and control. Analytical, numerical and experimental research methods. The method of complete bifurcation groups. Rare regular and chaotic phenomena. Multiplicity. Modern software: NLO, Spring, AUTO, Dynamics, Matcont. Applications: technical catastrophes prediction and prevention, control tasks, vibromechanics, electromechanics, cosmology, ecology, medicine.
Goals and objectives of the course in terms of competences and skills	The goal of the course is to provide students with skills to analyze nonlinear dynamical systems of different nature with modern methods. The objective of the course is to help students to acquire the competence required to analyze the behavior of typical nonlinear dynamical systems and apply this knowledge to other courses
Structure and tasks of independent studies	Studying the main topics of the study subject consulting the recommended literature. Individual and group (2-3) mini-projects on Nonlinear Dynamics and Chaos using method of complete bifurcation groups. Tutorials
Recommended literature	1. Francis C. Moon. Chaotic Vibrations. An Introduction for Applied Scientists and Engineers, Wiley, 2004. 2. James Gleick. Chaos. Making a New Science, 1987. 3. New concepts of nonlinear dynamics: complete bifurcation groups, protuberances, unstable periodic infinitiums and rare attractors J. of Vibroengineering, Vol. 10, Issue 4, p. 421-441, 2008. 6. Yoshisuke Ueda. The Road to Chaos - II, Aerial Press, 2001. 7. В.С. Анищенко. Сложные колебания в простых системах, Либрокком, 2009. 8. Jon J. Thomsen. Vibrations and Stability. Advanced Theory, Analysis, and Tools, Springer, 2003. 9. Miguel A.F. Sanjuan, Celso Grebogi. Recent Progress in Controlling Chaos, World Scientific, 2010. 10. Programmatura: NLO, Spring, AUTO, Dynamics, Matcont
Course prerequisites	Mathematics. Physics. Mechanics. Computer science

Course outline

Theme	Hours
Subject of Nonlinear Dynamics and Chaos. Typical models. Free oscillations of strongly nonlinear systems	4
Methods of nonlinear dynamics. Poincare method. Attractors and types of attractors	4
Driven oscillations in systems with polynomial restoring force. Multiplicity. Line mapping. Contour mapping. Direct and	4
Stability of nonlinear dynamical systems. Lyapunov stability. Stability in large. Basins of attraction	4
Subharmonic oscillations. Subharmonics in case of strong dissipation. Method of complete bifurcation groups	4
Non-smooth and vibro-impact systems. Simplest models: bilinear, trilinear, vibro-impact with one- and two-side limiter	4
Paradoxes of linear and nonlinear non monotonous damping	4
General features of nonlinear dynamical systems. Chaotic attractors and chaotic transient. Applications and control	4

Learning outcomes and assessment

Learning outcomes	Assessment methods
Ability to carry out research of nonlinear dynamical systems using the method of complete bifurcation groups	Individual and group (2-3) mini-projects
Knowledge of modern research methods for nonlinear dynamical systems	Test
Knowledge of general regularity in nonlinear dynamical systems	Test
